

HIMANSHU SHIYARA

Senior Unity Game Developer

himanshushiyara@gmail.com | +91 79906 06224 | Rajkot, India

SUMMARY

Senior Unity Game Developer with 6+ years turning ideas into polished, shipped games across Android, iOS, and WebGL platforms, spanning slot, multiplayer, puzzle, and simulation genres at multiple studios. I have contributed to product-based mobile titles with 10M+ downloads on the Play Store, writing clean C# gameplay code and squeezing high performance out of every platform — fast load times, smooth frame rates, and stable multiplayer experiences that keep players coming back. Beyond building games, I know what makes them succeed: I integrate monetization, analytics, and social features, and design integration structures that bring WebGL games to platforms like Telegram bot gaming. Today I lead a game department, reviewing a 300+ title catalog and setting the quality and performance bar across every release. I care as much about how a game feels in the player's hands as how cleanly it runs under the hood.

TECHNICAL SKILLS

Languages & Engines: C#, Unity (2D/3D), WebGL

Platforms: Android, iOS, WebGL, Cross-Platform Release

Gameplay & Graphics: Core Gameplay Programming, Unity UI, Particle Systems & Shaders, 2D Spine Animation, DoTween, Game Optimization

Backend & Integration: Socket.IO, Multiplayer Systems, REST API Integration, Database Design, Firebase, Telegram Bot Integration

Monetization & Analytics: Ad SDK Integration & Strategy, Revenue Model Management, AdMob, WebEngage

Tools & Workflow: Git, Jira, Team Leadership

PROFESSIONAL EXPERIENCE

Senior Game Developer — Game Department Lead, AllInOneTech Labs

2025 – Present

WebGL Game Development & Telegram Bot Integration • Funox.com

- Create and ship WebGL games in Unity while leading the game department that reviews and approves a 300+ title catalog from internal and external developers for Funox.com.
- Integrate ad SDKs, monetization, and platform APIs into WebGL games across the catalog to drive revenue and engagement.
- Engineered an integration structure connecting optimized WebGL games to Telegram bot gaming, including competitive tournament and reward systems.
- Optimized gameplay performance and stability platform-wide, reducing load times and improving player retention.

Unity Game Developer & VFX Artist, Gameium LLP

Oct 2022 – 2025

- Built and shipped slot games, multiplayer fish games, and poker card titles in Unity/C#, owning core gameplay mechanics and performance optimization.
- Led development of CosmoSlot (real-money slot platform) and a multiplayer Poker title, integrating WebEngage analytics and DoTween-driven animations.
- Shipped an emoji-based social feature that boosted multiplayer engagement across live titles.
- Created game VFX — win celebrations, reel and coin effects, and custom shaders — for polished cross-platform releases.

Game Developer — Lead VFX Artist, The AppGuruz

Jan 2019 – Oct 2022

- Shipped four product-based mobile titles for Android and iOS — Indian Cooking Star, Asian Cooking Star, Merge Fever, and Cooking Valley — across cooking, time-management, and merge-puzzle genres.
- Contributed to Asian Cooking Star, a flagship title that reached 10M+ downloads on the Google Play Store.
- Led the animation and VFX team, implementing Spine 2D animations, particle effects, and booster systems (activation logic, rewards, visual effects).
- Owned core gameplay programming, level design, and UI for level-based progression systems.

EDUCATION

Bachelor of Engineering, Electronics & Communication

2017 – 2019

Government Engineering College, Rajkot
